## Study of an ultra-stylish luxury-class coupe

### Maybach 6

Stuttgart/Pebble Beach, 25.08.2016, 20:42 Time

**USPA NEWS** - Study of an ultra-stylish luxury-class coupé: The ultimate in luxury: Vision Mercedes-Maybach 6. Classic. The coupé reinterprets classic, emotional design principles in an extreme way, following the Mercedes design philosophy of sensual purity.

Every August classic car fans from around the world converge on Pebble Beach in California for a very special beauty contest. This gathering of magnificent classic cars is the perfect place to premiere the exclusive Vision Mercedes-Maybach 6, a sensational luxury-class coupé. The 2+2's eater is a homage to the glorious age of the aero coupés and consciously carries this tradition forward into the future.

The Vision Mercedes-Maybach 6, which measures almost six metres in length, is designed as an electric car. The drive system has an output of 550 kW (750 hp). The shallow underfloor battery allows a range of over 500 kilometres according to the NEDC (over 200 miles according to EPA). With its sensual, emotional design ("hot") and intelligent details ("cool"), the Vision Mercedes-Maybach 6 represents the ultimate in luxury. The classic aesthetic proportions of the show car – the extremely long bonnet, the low roof line and the rearward positioning of the greenhouse – recall the aero coupés of days gone by. But this is not retro design – this is a reinterpretation of classic, aesthetic principles.

The ultimate in luxury: Vision Mercedes-Maybach 6 - "Our glamorous coupé, the Vision Mercedes-Maybach 6, represents the ultimate in contemporary luxury. It is hot and cool", states Gordon Wagener, Head of Design at Daimler AG. "With its intelligent appeal and reduced, technoid look, it perfectly embodies our design philosophy of sensual purity and our pursuit of aerodynamic efficiency".

Reinterpretation of classic, aesthetic principles: the exterior design

Clearly defined contours and organically formed wings stand in contrast to the sharply drawn, extended feature line on each side which defines the upper vehicle body from the radiator grille across the entire length of the vehicle to the rear. Below this, the main body has a bulging, muscular look, extending across the entire flank. There is also a striking contrast between the Maybach red paintwork and the chrome strips which sit above the wheel arches and in the centre of the bonnet and boot lid.

The exterior mirrors designed as cameras are supported on the wings. The extended, round "boat tail" format of the Vision Mercedes-Maybach 6's rear recalls a luxury yacht, and narrow tail lights which emphasise the width of the vehicle are integrated in its outer edges. Above this sit the two extremely shallow rear windows ("split window"). Further distinctive features at the rear include the diffuser with aluminium frame and the air outlets behind the wheel arches.

Luxurious 360° lounge featuring new materials: the interior design

The interior of the Vision Mercedes-Maybach 6 is a synthesis of intelligence and emotion and combines traditional Mercedes-Benz values with a new high-tech experience.

The dashboard wing curves across the door trim into the seat landscape, creating a 360° lounge. The new "inside out" spatial design adds a particular touch of finesse. The sitting surface forms a horizontal, which transitions into the vertical of the doors and finally becomes the underside of the dashboard wing.

In addition to the flowing contours, the material composition produces a luxury experience of the highest order. Authentic materials and colours such as rose gold are used to create luxurious accents. The interior, with its high-quality leather trim, has a cool colour scheme which perfectly underlines the digital innovations. The sitting surfaces have a Chesterfield look. In the doors and dashboard the traditional wood trim softens the appearance of the digital control and display interfaces. As a contrast to the digital world of the displays, elm is used in the floor area, creating a refined yachting look. Elm is the palest open-pore wood which Mercedes-Benz is

currently working on for series use.

In the front luggage area of the Vision Mercedes-Maybach 6 is a set of two suitcases, exclusively created for the vehicle. Here too the designers have followed the sensual, pure design idiom of Mercedes-Benz. Plenty of space has also been provided for further additions such as picnic accessories or personal items. Ever since Mercedes-Benz invented the car 130 years ago, driving has been a source of enjoyment and delight. With the increase in digitisation comes a simultaneous need for sustainable analogue solutions, the design of which has been emphasised and in places exaggerated in the concept car. In the Vision Mercedes-Maybach 6 this can be seen above all in the "hyperanalogue" instruments with needles and circular, crystal displays.

The classic circular instruments are combined with deep displays and act as a reference to the unique history of Mercedes-Benz. In contrast, other display elements are digitally integrated into a continuous glass trim part. Information about the seat, for example, can be shown on this digital strip. Map information is also shown in the front area of the strip. Menu content is extended along a digital line which extends to the sides as far as the occupants, who can set their own content ergonomically using touch control.

The front windscreen serves as a transparent display: driving-related data and geographical information is shown across its full width, augmenting the outside world with additional information. This information can be controlled and adjusted by the occupants using gestures.

The luxury padded leather upholstery is a particular highlight. Its traditional look is combined with future technology here - the buttons which would normally be trimmed in leather have been replaced in the upholstered surfaces by miniature "body sensor displays".

These scan the passengers and monitor, for example, their vital functions. As a result, comfort features such as seat climate or the massage function, for example, can be activated or the seat settings adjusted to the passenger. The sensors embedded in the upholstery also record the incidence of light, the colour of the occupant's clothing and the ambient temperature. This information can be used to trigger new, emotional lighting effects in the interior.

The concept car aims to embody the ultimate in luxury, and this is underlined by the fact that the driver can switch to digital/autonomous mode. Another highlight is offered by the floating, transparent centre tunnel, which visualises the drive system's electrical energy flow for the occupants. The side sills, illuminated by LED light strips, clearly underline the fact that the Vision Mercedes-Maybach 6 is designed as an electric car. Thanks to its four compact permanent magnet synchronous electric motors, it features all-wheel drive.

The output of the drive system is 550 kW (750 hp). The shallow underfloor battery has a usable capacity of approx. 80 kWh. This not only allows performance characteristics typical of a sports car (acceleration from 0 to 100 km/h in under four seconds, top speed electronically governed at 250 km/h) but also a range of over 500 kilometres according to the NEDC (over 200 miles according to EPA).

Vision: add an extra 100 kilometres to the range in just five minutes

The quick-charge function is also visionary: as a result of DC charging based on the CCS standard, the system allows an impressive charging capacity of up to 350 kW. In just five minutes enough power can be charged to achieve an additional range of around 100 kilometres.

The battery can either be charged via a cable connection at a public charging station or a conventional domestic outlet or, for even more convenience, it can be charged wirelessly, via an electromagnetic field.

The wow effect: visionary show cars with long-term prospects

With its impressive dimensions, the Vision Mercedes-Maybach 6 (length/width/height: 5700/2100/1328 millimetres) is the first luxury coupé in the series of visionary design show cars from Mercedes-Benz. These include the Vision EnerG<sup>™</sup>Force (Los Angeles, November 2012), AMG Vision Gran Turismo (Sunnyvale, 2013) and Vision Tokyo (Tokyo, 2015). Thanks to the global nature of the Mercedes-Benz Design function, these concept vehicles take cues from local trends in design, culture and mobility and make these the focal point of the respective mobility concept. At the same time these show cars are looking far into the future.

Mercedes-Maybach: perfection blends with exclusivity

Mercedes-Maybach stands for the ultimate in exclusivity and individuality. The target group is made up of status-oriented customers. The current vehicles include the Mercedes-Maybach S 500 and S 600 models, launched in February 2015, which blend the perfection of the Mercedes-Benz S-Class with the exclusivity of Maybach. A special protection version, the Mercedes-Maybach S 600 Guard, is the world's first passenger car to meet the highest ballistic protection level for civilian vehicles, VR10.
